Model BOT08-k: white light

### Product Description

These Bottlelight lamp insert fits into all empty wine bottles, champagne and other bottles with an inner bottleneck diameter of 17-20 mm, and it emits a beautiful and evenly distributed light over the table. Power is supplied by two standard AA alkaline (1.5 V) or rechargeable NiMH batteries (1.2 V). The batteries can be easily filled or replaced through an opening with an open lid.

The first brightness (15lm) is switched on/off by simply turning the cover on/off until it reaches the battery contact. The second brightness (50lm) is activated by briefly turning the lid off and on again. After a longer switch-off (>1s), the first brightness is activated again. This means the brightness can be easily adjusted to suit your needs. Electronics keep the respective brightness constant.

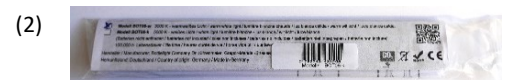

The Bottlelight is water resistant at the bottom and rain resistant from the top. However, the device must not be put into beverages. The device must be kept away from children under the age of 3, because of the batteries. The manufacturer does not accept any liability in such cases. The lamps come without batteries.
